

# Sum of Left Leaf Nodes

Given a Binary Tree of size **N**. Find the sum of all the leaf nodes that are left child of their parent of the given binary tree.

## Example 1:

**Input:**

**Output:** 2

## Example 2:

**Input :**

**Output:** 13

**Explanation:**

sum = 6 + 7 = 13

## Your Task:

You don't need to read input or print anything. Your task is to complete the function **leftLeavesSum()** which takes the root node of the tree as input and returns the sum of all the left leaf nodes present in the given binary tree.

**Expected Time Complexity:** O(N).

**Expected Auxiliary Space:** O(Height of the Tree).

## Constraints:

1<=Number of nodes<=10<sup>5</sup>
